Highlights

The Model Knows the Textbook but Not Your Class: Curriculum Knowledge Graph Constraints for Slide Generation in Two Vocational-Education Courses

- Course-level knowledge is absent from pretraining data; it must be supplied.
- One contract is prompt and acceptance test; two courses replicate the direction.
- Coverage rises from 0.61–0.70 to 0.98; a length-matched placebo rules out length.
- Misconceptions 1.000 (0.000) vs 0.556 (0.527): reliability, not mean gain.
- Ordering is a boundary: its ablation deletes a duplicate, not the constraint.
