
(a)

Compiled contract $C(u)$: one source, two roles

S_u	required (≥ master)	circular queue · modular arithmetic · empty condition full condition · queue length · implementation
$\prec_u$	teaching order (topological)	circular queue → modular arith. → {empty, full} → {queue length, implementation}
M_u	must be corrected	MC03: full condition is rear == front → at least one slide with layout = misconception
F_u	forbidden (not taught here)	priority queue · monotone queue · message queue shortest path · topological sort
B_u	sibling recap allowed	queue · head and tail · false overflow · linked queue
k_u	slide budget	7 slides
